**Subject:** Doctor requests on improving Clinic Master

Dear Milly,

On Monday 30<sup>th</sup> May 2016 we had a meeting with the doctors (Dr. Muyanja and Dr. Mutebi) to discuss again the adjustments that need to be done to improve the usability of Clinic Master and improve the quality of data captured by system.

These are the issues raised in the discussion.

1. Sometimes Clinic Master takes long to respond to commands which frustrates the doctors.
2. The need to use checkboxes for data input instead of the textfields for some entries which require the doctor to type a lot. This affects the speed of input because most doctors are not good at typing.
3. The Clinical findings window needs to be expanded to cater for more meaningful and detailed options. Dr Muyanja has a detailed list of items that need to be added to the Clinical findings window.
4. The Clinical findings window should be categorized to cater for the major categories of patients. E.g. Obs gyn, Paed, ENT etc. This will make it easier for doctors to capture more detailed info about the patients.
5. We need to improve the list of diagnoses to show only the most common diagnoses in Uganda. The current list contains a lot of irrelevant and confusing data. The doctors offered to give us a list of the diagnoses.
6. Restricting doctors from prescribing under another doctor's username.
7. Logging each doctor's addition or update of another doctor's entries.
8. Need to provide option for previous investigations under clinical findings.
9. Need to make some fields mandatory.

I request that you analyze the issues and give us a way forward. Tell us which problems can be resolved without any update to the software and which issues will definitely require a redesign of some components in the software (specifying how long it might take you to update).

Remember we haven't received some of the updates we requested before this and we hope you can put them into consideration as well.

Thanks!
